

## 2019 Training Opportunities

# Interpreting Workshops

### Aims/Purpose:

To educate hospital and primary care staff on how to book and use interpreting services

### Content:

How to use interpreters in a clinical context, in order to meet the requirements of human rights and sign language legislation.

Come and join us for a varied programme including an interpreting demonstration and interaction with your colleagues. We will help you identify the risks of using clients' family and friends as BYO interpreters, and will give you some tools for working with interpreters to get the best possible communications with your clients.
